¹ This information is provided in accordance with the German Car Energy Consumption Labeling Regulation (PKW-Energieverbrauchsetikettierung). The values stated were determined using the prescribed WLTP (Worldwide Harmonised Light-Duty Vehicles Test Procedures) measurement method. A car's fuel consumption and CO₂ emissions depend not only on the car's efficient use of fuel, but also on driving style and other non-technical factors. CO₂ is the greenhouse gas primarily responsible for global warming. A guide to the Fuel consumption and CO₂ emissions of all new car models offered in Germany are available free of charge at any sales outlet in Germany where new cars are displayed or offered. The guide is also available here: <https://www.dat.de/co2/>

² Only the CO₂ emissions generated by the operation of the vehicle are reported. CO₂ emissions generated or avoided by the production and provision of the vehicle, as well as the fuel or energy sources, are not taken into account when determining CO₂ emissions according to the WLTP.

³ Due to CO₂ pricing, fuel cost increases are possible in the future. Future CO₂ price developments are uncertain; therefore, potential CO₂ costs are calculated based on three assumed CO₂ prices for the period 2025 to 2034. Actual CO₂ prices may be higher or lower than those assumed in the model calculations used here. CO₂ emissions are included in the fuel costs when refueling.
